dekoration ideas

UV TEC

With these brilliant, environmental-friendly colours on an organic basis you can match nearly all Pantone-colours.

DECOVIEW FROSTED

Individual decoration elements are printed onto frosted glasses in special inks which create a transparent effect.

Give your promotion
a depth effect.

A laser-engraving fits perfectly to decorate these elegant bicolour porcelain-mugs, as it accentuates the contrast between the shiny, coloured glazing and the mat or deep lasering.

With a special technology different colour-shades can be created, as for example grey on the black mug and light blue on the blue mug. You can also have a lasering on the handle or underneath the bottom of the mug.
